(54) Title: DIAMINE DERIVATIVES OF QUINONE AND USES THEREOF

(57) Abstract: Diamine derivatives of quinones, and related compounds, including salts thereof, that modulate the levels of gene expression in cellular systems, such as cancer cells, are disclosed, along with methods for preparing such compounds and derivatives, as well as pharmaceutical compositions containing these compounds and derivatives as active ingredients. Methods of using these as compounds and derivatives as therapeutic agents are also described.

# Diamine Derivatives of Quinone and Uses Thereof

5

This application claims priority of U.S. Provisional Application Serial No. 60/492,521, filed 5 August 2003, and 60/523,477, filed 19 November 2003, and U.S. Application Serial No. 10/758,521, filed 15 January 2004, the disclosures of which are hereby incorporated by reference in their entirety.

10

# FIELD OF THE INVENTION

The present invention relates to chemical agents affecting levels of gene expression in cellular systems, including cancer cells. In particular, the present invention relates to derivatives of quinone moiety, processes for their preparation, their use as antitumor drugs and pharmaceutical compositions containing them as active ingredients.

20

25

15

# BACKGROUND OF THE INVENTION

Screening assays for novel drugs are based on the response of model cell based systems in vitro to treatment with specific compounds. Various measures of cellular response have been utilized, including the release of cytokines, alterations in cell surface markers, activation of specific enzymes, as well as alterations in ion flux and/or pH. Some such screens rely on specific genes, such as oncogenes or tumor suppressors.

Our approach to screening small molecule compounds as potential anticancer drugs is based on the idea that for each specific tumor type, a unique signature set of genes, that are differentially expressed in tumor cells if compared to corresponding normal cells, can be established. The relatively small signature set, containing 10-30 genes, allows for easy, high throughput screening for compounds that can reverse the gene expression profile from patterns typical for cancer cells to patterns seen in normal cells. As a part of our efforts to provide new diversified compounds for high throughput gene expression screening, we designed and synthesized a number of novel derivatives of quinones. Gene expression screening and subsequent cytotoxicity screening revealed that some of the compounds possess biological activity. Consequent, more detailed structure-activity relationship studies led to the discovery of compounds of formula I as new small molecule agents having antineoplastic activity.

# **BRIEF SUMMARY OF THE INVENTION**

In one aspect, the present invention relates to novel organic compounds, derivatives of quinone, that have the ability to function as gene expression modulators for genes found in cancer cells, especially genes involved in misregulated signal transduction pathways typical for cancer such as colon and breast cancers.

In one embodiment of the present invention, the compounds disclosed herein are able to up regulate genes found to be up regulated in normal (i.e., non-cancerous) cells versus cancer cells, especially colon and breast cancer cells, thereby producing an expression profile for said gene(s) that more resembles the expression profile found in normal cells. In another embodiment, the compounds disclosed herein are found to down regulate genes found to be up regulated in cancer cells, especially colon and breast cancer cells, relative to normal (i.e., non-cancerous) cells thereby producing

an expression profile for said gene(s) that more resembles the expression profile found in normal cells. Thus, in addition to activity in modulating a particular gene that may or may not have a major role in inducing or sustaining a cancerous condition, the agents disclosed herein also find value in regulating a set of gene whose combined activity is related to a disease condition, such as cancer, especially colon and breast cancer, including adenocarcinoma of the colon. Thus, while an overall set of genes is modulated, the effect of modulating any subset of these may be disproportionately large or small with respect to the effect in ameliorating the overall disease process. Consequently, different disease conditions may rely on different subsets of genes to be active or inactive as a basis for the overall disease process.

Thus, the present invention relates to novel organic compounds that have the ability to function as gene modulators for genes found in normal (i.e., non-cancer) cells and which genes are found to be up regulated or down regulated in normal cells, especially colon and breast cells. Such an effect may prevent a disease condition, such as cancer, from arising in those otherwise more susceptible to such a condition. In one such embodiment, administration of one or more of the agents disclosed herein may succeed in preventing a cancerous condition from arising.

In other embodiments, the agents disclosed herein find use in combination with each other as well as with other agents, such as where a mixture of one or more of the agents of the present invention are given in combination or where one or more of the agents disclosed herein is given together with some other already known therapeutic agent, possibly as a means of potentiating the affects of such known therapeutic agent or vice versa.

30

25

5

10

15

20

The present invention also relates to processes of preventing or treating disease conditions, especially cancer, most especially colon and

breast cancer, by administering to a subject, such as a mammal, especially a human, a therapeutically active amount of one or more of the agents disclosed herein, including where such agents are given in combination with one or more known therapeutic agents.

5

#### **DEFINITIONS**

The following is a list of definitions for terms used herein.

10

"Acyl" or "carbonyl" is a radical formed by removal of the hydroxy from a carboxylic acid (i.e., R-C(=O)-). Preferred acyl groups include (for example) acetyl, formyl, and propionyl.

15

20

25

30

"Alkyl" is a saturated hydrocarbon chain having 1 to 15 carbon atoms, preferably 1 to 10, more preferably 1 to 4 carbon atoms. "Alkene" is a hydrocarbon chain having at least one (preferably only one) carbon-carbon double bond and having 2 to 15 carbon atoms, preferably 2 to 10, more preferably 2 to 4 carbon atoms. "Alkyne" is a hydrocarbon chain having at least one (preferably only one) carbon-carbon triple bond and having 2 to 15 carbon atoms, preferably 2 to 10, more preferably 2 to 4 carbon atoms. Alkyl, alkene and alkyne chains (referred to collectively as "hydrocarbon chains") may be straight or branched and may be unsubstituted or substituted. Preferred branched alkyl, alkene and alkyne chains have one or two branches, preferably one branch. Preferred chains are alkyl. Alkyl, alkene and alkyne hydrocarbon chains each may be unsubstituted or substituted with from 1 to 4 substituents; when substituted, preferred chains are mono-, di-, or tri-substituted. Alkyl, alkene and alkyne hydrocarbon chains each may be substituted with halo, hydroxy, aryloxy (e.g., phenoxy), heteroaryloxy, acyloxy acetoxy), carboxy, aryl (e.g., phenyl), heteroaryl, cycloalkyl, heterocycloalkyl, spirocycle, amino, amido, acylamino, keto, thioketo, cyano,

or any combination thereof. Preferred hydrocarbon groups include methyl, ethyl, propyl, isopropyl, butyl, vinyl, allyl, butenyl, and exomethylenyl.

Also, as referred to herein, a "lower" alkyl, alkene or alkyne moiety (e.g., "lower alkyl") is a chain comprised of 1 to 6, preferably from 1 to 4, carbon atoms in the case of alkyl and 2 to 6, preferably 2 to 4, carbon atoms in the case of alkene and alkyne.

"Alkoxy" is an oxygen radical having a hydrocarbon chain substituent,

where the hydrocarbon chain is an alkyl or alkenyl (i.e., -O-alkyl or -O-alkenyl). Preferred alkoxy groups include (for example) methoxy, ethoxy, propoxy and allyloxy.

"Aryl" is an aromatic hydrocarbon ring. Aryl rings are monocyclic or fused bicyclic ring systems. Monocyclic aryl rings contain 6 carbon atoms in 15 the ring. Monocyclic aryl rings are also referred to as phenyl rings. Bicyclic aryl rings contain from 8 to 17 carbon atoms, preferably 9 to 12 carbon atoms, in the ring. Bicyclic aryl rings include ring systems wherein one ring is aryl and the other ring is aryl, cycloalkyl, or heterocycloakyl. Preferred bicyclic aryl rings comprise 5-, 6- or 7-membered rings fused to 5-, 6-, or 7-20 membered rings. Aryl rings may be unsubstituted or substituted with from 1 to 4 substituents on the ring. Aryl may be substituted with halo, cyano, nitro, hydroxy, carboxy, amino, acylamino, alkyl, heteroalkyl, haloalkyl, phenyl, aryloxy, alkoxy, heteroalkyloxy, carbamyl, haloalkyl, methylenedioxy, heteroaryloxy, or any combination thereof. Preferred aryl rings include 25 naphthyl, tolyl, xylyl, and phenyl. The most preferred aryl ring radical is phenyl.

"Aryloxy" is an oxygen radical having an aryl substituent (i.e., -O-aryl). Preferred aryloxy groups include (for example) phenoxy, napthyloxy, methoxyphenoxy, and methylenedioxyphenoxy.

30

"Cycloalkyl" is a saturated or unsaturated hydrocarbon ring. Cycloalkyl rings are not aromatic. Cycloalkyl rings are monocyclic, or are fused, spiro, or bridged bicyclic ring systems. Monocyclic cycloalkyl rings contain from about 3 to about 9 carbon atoms, preferably from 3 to 7 carbon atoms, in the ring. Bicyclic cycloalkyl rings contain from 7 to 17 carbon atoms, preferably from 7 to 12 carbon atoms, in the ring. Preferred bicyclic cycloalkyl rings comprise 4-, 5- 6- or 7-membered rings fused to 5-, 6-, or 7-membered rings. Cycloalkyl rings may be unsubstituted or substituted with from 1 to 4 substituents on the ring. Cycloalkyl may be substituted with halo, cyano, alkyl, heteroalkyl, haloalkyl, phenyl, keto, hydroxy, carboxy, amino, acylamino, aryloxy, heteroaryloxy, or any combination thereof. Preferred cycloalkyl rings include cyclopropyl, cyclopentyl, and cyclohexyl.

5

10

20

30

"Halo" or "halogen" is fluoro, chloro, bromo or iodo. Preferred halo are fluoro, chloro and bromo; more preferred typically are chloro and fluoro, especially fluoro.

"Haloalkyl" is a straight, branched, or cyclic hydrocarbon substituted with one or more halo substituents. Preferred are  $C_1$ - $C_{12}$  haloalkyls; more preferred are  $C_1$ - $C_6$  haloalkyls; still more preferred still are  $C_1$ - $C_3$  haloalkyls. Preferred halo substituents are fluoro and chloro. The most preferred haloalkyl is trifluoromethyl.

"Heteroatom" is a nitrogen, sulfur, or oxygen atom. Groups containing more than one heteroatom may contain different heteroatoms.

"Heteroalkyl" is a saturated or unsaturated chain containing carbon and at least one heteroatom, wherein no two heteroatoms are adjacent. Heteroalkyl chains contain from 2 to 15 member atoms (carbon and heteroatoms) in the chain, preferably 2 to 10, more preferably 2 to 5. For example, alkoxy (i.e., -O-alkyl or -O-heteroalkyl) radicals are included in heteroalkyl. Heteroalkyl chains may be straight or branched. Preferred

5

10

15

20

25

30

branched heteroalkyl have one or two branches, preferably one branch. Preferred heteroalkyl are saturated. Unsaturated heteroalkyl have one or more carbon-carbon double bonds and/or one or more carbon-carbon triple bonds. Preferred unsaturated heteroalkyls have one or two double bonds or one triple bond, more preferably one double bond. Heteroalkyl chains may be Preferred unsubstituted or substituted with from 1 to 4 substituents. substituted heteroalkyl are mono-, di-, or tri-substituted. Heteroalkyl may be substituted with lower alkyl, haloalkyl, halo, hydroxy, aryloxy, heteroaryloxy, acyloxy, carboxy, monocyclic aryl, heteroaryl, cycloalkyl, heterocycloalkyl, spirocycle, amino, acylamino, amido, keto, thioketo, cyano, or any combination thereof. Where a group is described, for example, as an alkyl derivative, such as "-ethylpyridine" the dash "-" indicate point of attachment of the substituent. Thus, "-ethylpyridine" means attachment of ethylpyridine via the ethyl portion of the group whereas "ethylpyridine-" means attachment via the pyridinyl ring.

"Heteroaryl" is an aromatic ring containing carbon atoms and from 1 to about 6 heteroatoms in the ring. Heteroaryl rings are monocyclic or fused bicyclic ring systems. Monocyclic heteroaryl rings contain from about 5 to about 9 member atoms (carbon and heteroatoms), preferably 5 or 6 member atoms, in the ring. Bicyclic heteroaryl rings contain from 8 to 17 member atoms, preferably 8 to 12 member atoms, in the ring. Bicyclic heteroaryl rings include ring systems wherein one ring is heteroaryl and the other ring is aryl, heteroaryl, cycloalkyl, or heterocycloalkyl. Preferred bicyclic heteroaryl ring systems comprise 5-, 6- or 7-membered rings fused to 5-, 6-, or 7-membered rings. Heteroaryl rings may be unsubstituted or substituted with from 1 to 4 substituents on the ring. Heteroaryl may be substituted with halo, cyano, nitro, hydroxy, carboxy, amino, acylamino, alkyl, heteroalkyl, haloalkyl, phenyl, alkoxy, aryloxy, heteroaryloxy, or any combination thereof. Preferred heteroaryl rings include, but are not limited to, the following:

"Heteroaryloxy" is an oxygen radical having a heteroaryl substituent (i.e., -O-heteroaryl). Preferred heteroaryloxy groups include (for example) pyridyloxy, furanyloxy, (thiophene)oxy, (oxazole)oxy, (thiazole)oxy, (isoxazole)oxy, pyrmidinyloxy, pyrazinyloxy, and benzothiazolyloxy.

5

10

15

20

"Heterocycloalkyl" is a saturated or unsaturated ring containing carbon atoms and from 1 to about 4 (preferably 1 to 3) heteroatoms in the ring. Heterocycloalkyl rings are not aromatic. Heterocycloalkyl rings are monocyclic, or are fused, bridged, or spiro bicyclic ring systems. Monocyclic heterocycloalkyl rings contain from about 3 to about 9 member atoms (carbon and heteroatoms), preferably from 5 to 7 member atoms, in the ring. Bicyclic heterocycloalkyl rings contain from 7 to 17 member atoms, preferably 7 to 12 member atoms, in the ring. Bicyclic heterocycloalkyl rings contain from about 7 to about 17 ring atoms, preferably from 7 to 12 ring atoms. Bicyclic heterocycloalkyl rings may be fused, spiro, or bridged ring systems. Preferred bicyclic heterocycloalkyl rings comprise 5-, 6- or 7membered rings fused to 5-, 6-, or 7-membered rings. Heterocycloalkyl rings may be unsubstituted or substituted with from 1 to 4 substituents on the ring. Heterocycloalkyl may be substituted with halo, cyano, hydroxy, carboxy, keto, thioketo, amino, acylamino, acyl, amido, alkyl, heteroalkyl, haloalkyl, phenyl, alkoxy, aryloxy or any combination thereof. Preferred substituents on heterocycloalkyl include halo and haloalkyl. Preferred heterocycloalkyl rings include, but are not limited to, the following:

2,3-Dihydro-1*H*-Isoindole Phthalan 1,4-Oxathiane 1,4-Dithiane hexahydro-Pyridazine

5

10

1,2-Benzisothiazoline Benzylsultam

While alkyl, heteroalkyl, cycloalkyl, and heterocycloalkyl groups may be substituted with hydroxy, amino, and amido groups as stated above, the following are not envisioned in the invention:

Enols (OH attached to a carbon bearing a double bond).

Amino groups attached to a carbon bearing a double bond (except for vinylogous amides).

PCT/US2004/024775 WO 2005/016264

More than one hydroxy, amino, or amido attached to a single carbon (except where two nitrogen atoms are attached to a single carbon atom and all three atoms are member atoms within a heterocycloalkyl ring).

Hydroxy, amino, or amido attached to a carbon that also has a heteroatom attached to it.

5

10

15

20

25

A "pharmaceutically-acceptable salt" is a cationic salt formed at any acidic (e.g., carboxylic acid) group, or an anionic salt formed at any basic (e.g., amino) group. Many such salts are known in the art, as described in World Patent Publication 87/05297, Johnston et al., published September 11, 1987 incorporated by reference herein. Preferred cationic salts include the alkali metal salts (such as sodium and potassium), and alkaline earth metal salts (such as magnesium and calcium) and organic salts. Preferred anionic salts include the halides (such as chloride salts), sulfonates, carboxylates, phosphates, and the like.

Such salts are well understood by the skilled artisan, and the skilled artisan is able to prepare any number of salts given the knowledge in the art. Furthermore, it is recognized that the skilled artisan may prefer one salt over another for reasons of solubility, stability, formulation ease and the like. Determination and optimization of such salts is within the purview of the skilled artisan's practice.

A "solvate" is a complex formed by the combination of a solute (e.g., a metalloprotease inhibitor) and a solvent (e.g., water). See J. Honig et The Van Nostrand Chemist's Dictionary, p. 650 (1953). al., Pharmaceutically-acceptable solvents used according to this invention include those that do not interfere with the biological activity of the metalloprotease inhibitor (e.g., water, ethanol, acetic acid, N,N-30 dimethylformamide and others known or readily determined by the skilled artisan).

The terms "optical isomer", "stereoisomer", and "diastereomer" have the accepted meanings (see, e.g., <u>Hawley's Condensed Chemical Dictionary</u>, 11th Ed.). The illustration of specific protected forms and other derivatives of the compounds of the instant invention is not intended to be limiting. The application of other useful protecting groups, salt forms, etc. is within the ability of the skilled artisan.

### **DETAILED SUMMARY OF THE INVENTION**

10

5

The present invention relates generally to a compound having the structure:

15

20

#### Formula I

wherein

W, X, Y and Z are each selected from a bond, CH, C-R<sub>8</sub>, C-R<sub>9</sub>, C-R<sub>10</sub>, C-R<sub>11</sub>, O (oxygen), N (nitrogen) and S (sulfur) and no more than two of W, X, Y and Z are simultaneously O, N and S;

and wherein,  $R_8$ ,  $R_9$ ,  $R_{10}$ ,  $R_{11}$  each may be hydrogen, hydroxyl, sulfhydryl, alkoxy, thioalkoxy, alkyl, halogen, CN, CF<sub>3</sub>, NO<sub>2</sub>, COOR<sub>12</sub>, CONR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>COR<sub>13</sub>, NR<sub>12</sub>SO<sub>2</sub>R<sub>13</sub>, and NR<sub>14</sub>CONR<sub>12</sub>R<sub>13</sub>;

25

5	wherein R <sub>12</sub> , R <sub>13</sub> and R <sub>14</sub> are hydrogen, alkyl, heteroalkyl, aryl, arylalkyl, heteroaryl, heteroarylalkyl, cycloalkyl, or heterocycloalkyl; NR <sub>12</sub> R <sub>13</sub> may form a substituted or unsubstituted, mono or bicyclic rings, with one to four heteroatoms selected from N, O and S; and wherein, R <sub>12</sub> and R <sub>14</sub> may form a 4, 5, 6 or 7-membered cyclic ring system;
10	and wherein $R_{1}$ , $R_{2}$ , $R_{3}$ , $R_{4}$ , and $R_{5}$ are each selected from:
	hydrogen, alkyl,
	substituted or unsubstituted phenyl or polyaromatic rings,
	substituted or unsubstituted heteroaromatic, with hetero
	atom(s) as N, O, S,
15	substituted or unsubstituted aralkyl,
	substituted or unsubstituted cyclo or polycyclo hydrocarbon
	and mono or polyheterocycle (3-8 atoms per ring) with one
	to four hetero atoms as N, O, or S; and
	wherein said substitutions are selected from hydroxyl,
20	sulfhydryl, alkoxy, thioalkoxy, alkyl, halogen, CN, CF <sub>3</sub> , NO <sub>2</sub> ,
	COOR <sub>12</sub> , CONR <sub>12</sub> R <sub>13</sub> , NR <sub>12</sub> R <sub>13</sub> , NR <sub>12</sub> COR <sub>13</sub> , NR <sub>12</sub> SO <sub>2</sub> R <sub>13</sub> , and NR <sub>14</sub> CONR <sub>12</sub> R <sub>13</sub> ;
	wherein $R_{12}$ , $R_{13}$ and $R_{14}$ are each selected from
	hydrogen, alkyl, heteroalkyl, aryl, arylalkyl, heteroaryl,
25	heteroarylalkyl, cycloalkyl, and heterocycloalkyl;
	NR <sub>12</sub> R <sub>13</sub> is also substituted or unsubstituted, mono or
	bicyclic rings with one to four heteroatoms selected
	from N, O and S;
	and wherein $R_{12}$ and $R_{14}$ may, in one embodiment,
30	form a 4, 5, 6 or 7-membered cyclic ring system;

and wherein  $R_1,\,R_4,\,R_5,\,R_6$  and  $R_7$  may also be selected from:

$$\begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_{n} - NR_{17}R_{18}; \begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_{n} - NR_{19}COR_{17}; \begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_{n} - NR_{19}CONR_{17}R_{18}; \begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_{n} - OR_{17}; \begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_$$

5

wherein n is 2, 3 or 4 and  $R_{15}$ ,  $R_{16}$ ,  $R_{17}$ ,  $R_{18}$  and  $R_{19}$  are selected from hydrogen, alkyl, cycloalkyl, unsubstituted or substituted aryl, unsubstituted or substituted heteroaryl, and unsubstituted or substituted alkylaryl;

10

and  $NR_{17}R_{18}$  may also be a substituted or unsubstituted, mono or bicyclic ring with one to four heteroatoms selected from N, O and S;

and wherein  $R_{17}$  and  $R_{19}$  may form a 4, 5, 6 or 7-membered cyclic ring system;

and wherein  $R_4$  is also selected from -COR<sub>13</sub>, -SO<sub>2</sub>R<sub>13</sub>, -CONR<sub>12</sub>R<sub>13</sub>, and -C(=NR<sub>19</sub>)NR<sub>17</sub>R<sub>18</sub>;

15

wherein R<sub>6</sub> and R<sub>7</sub> may also each be selected from:

alkyl,

substituted and unsubstituted phenyl or polyaromatic,

5

10

15

20

25

30

substituted and unsubstituted heteroaromatic rings with hetero atoms selected from N, O and S, substituted and unsubstituted aralkyl, substituted and unsubstituted, cyclic or polycyclic hydrocarbon and mono or polyheterocyclic rings, each of 3-8 atoms, said heterocycle having one to four hetero atoms selected from N, O and S; and wherein substitutions are selected from hydroxyl, sulfhydryl, alkoxy, thioalkoxy, alkyl, halogen, CN, CF<sub>3</sub>, NO<sub>2</sub>, COOR<sub>12</sub>, CONR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>COR<sub>13</sub>, NR<sub>12</sub>SO<sub>2</sub>R<sub>13</sub>,

wherein R<sub>12</sub>, R<sub>13</sub> and R<sub>14</sub> are each selected from hydrogen, alkyl, heteroalkyl, aryl, arylalkyl, heteroaryl, heteroarylalkyl, cycloalkyl, and heterocycloalkyl; NR<sub>12</sub>R<sub>13</sub> is also unsubstituted, monosubstituted or polysubstituted mono or bicyclic ring with one to four heteroatoms such as N, O, S;

and wherein  $NR_4R_5$  and  $NR_6R_7$  may each form a substituted or unsubstituted, mono or bicyclic ring comprising one to four heteroatoms selected from N, O and S and wherein said N may also be substituted or unsubstituted,

and including salts of any of the above-recited structures.

NR<sub>14</sub>CONR<sub>12</sub>R<sub>13</sub>;

In another preferred embodiment, R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>, R<sub>4</sub>, and R<sub>5</sub> are each selected from hydrogen, alkyl, substituted or unsubstituted phenyl, substituted or unsubstituted polyaromatic, and substituted or unsubstituted heteroaromatic comprising one or more hetero atom(s) selected from N, O and S.

In another preferred embodiment, R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>, R<sub>4</sub>, and R<sub>5</sub> are each selected from substituted or unsubstituted aralkyl, substituted or unsubstituted

cyclo or polycyclo hydrocarbon or mono or polyheterocycle (3-8 atoms per ring) with one to four hetero atoms selected from N, O and S.

In any of these preferred embodiments, substitutions are selected from hydroxyl, sulfhydryl, lower alkoxy (1-6 carbon), lower thioalkoxy (1-6 carbon), lower alkyl (1-6 carbon), halogen, CN, CF<sub>3</sub>, NO<sub>2</sub>, COOR<sub>12</sub>, CONR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>COR<sub>13</sub>, NR<sub>12</sub>SO<sub>2</sub>R<sub>13</sub>, and NR<sub>14</sub>CONR<sub>12</sub>R<sub>13</sub>, wherein R<sub>12</sub>, R<sub>13</sub> and R<sub>14</sub> are hydrogen, alkyl, heteroalkyl, aryl, arylalkyl, heteroaryl, heteroarylalkyl, cycloalkyl, or heterocycloalkyl. In a further preferred embodiment of the foregoing, R<sub>12</sub> and R<sub>14</sub> form a 4, 5, 6 or 7-member cyclic ring system.

5

10

15

In a further preferred embodiment,  $NR_{12}R_{13}$  forms a substituted or unsubstituted mono or bicyclic ring comprising one to four heteroatoms selected from N, O and S.

In one preferred embodiment,  $R_1$ ,  $R_4$ ,  $R_5$ ,  $R_6$  and  $R_7$  are each selected from:

wherein n is 2, 3 or 4 and  $R_{15}$ ,  $R_{16}$ ,  $R_{17}$ ,  $R_{18}$  and  $R_{19}$  are selected from hydrogen, lower alkyl, cycloalkyl, substituted and unsubstituted aryl, substituted or unsubstituted heteroaryl, and substituted or unsubstituted alkylaryl. In a preferred embodiment thereof,  $NR_{17}R_{18}$  is forms a substituted or unsubstituted, mono or bicyclic ring comprising one to four heteroatoms selected from N, O and S. In another preferred embodiment thereof,  $R_{17}$  and  $R_{19}$  form a 4, 5, 6 or 7-membered cyclic ring system.

10

15

5

In a preferred embodiment of the compounds of Formula I, W and Z are each selected from C-R<sub>8</sub>, C-R<sub>11</sub> and N, and X and Y are each selected from C-R<sub>9</sub> and C-R<sub>10</sub>. In another preferred embodiment, X and Y are each selected from C-R<sub>9</sub>, C-R<sub>10</sub> and N and wherein W and Z are each selected from C-R<sub>8</sub> and C-R<sub>11</sub>. In another preferred embodiment, W is C-R<sub>8</sub> or N, and X, Y and Z are each selected from C-R<sub>9</sub>, C-R<sub>10</sub> and C-R<sub>11</sub>.

Where a position in a structure, such as W, X, Y or Z, or a substituent, such as an R group, as recited above, is described as selected from, it means

that each of W, X, Y and Z, or R, can be selected from the indicated group of structures or atoms and each is selected independently of the others unless it is expressly stated herein to be otherwise. By "independent" is meant that the selection of one substituent does not limit the range of selection for another substituent, unless expressly stated as such. For example, where X and Y are selected from a range of atoms, such as N, O and S, then X and Y may be the same or different and the selection of one does not limit the range of the other. Thus, if X is nitrogen then Y can still be N, O or S.

5

15

20

25

30

10 Where a position, for example, in a ring, is described as being selected from "a bond" etc., this means that the position is not occupied by an atom. Thus, if in Formula I, X is a bond, then the ring with W, X, Y and Z is a 5 membered ring instead of a 6 membered ring.

In a preferred embodiment, NR<sub>4</sub>R<sub>5</sub> and/or NR<sub>6</sub>R<sub>7</sub> of Formula I form(s) a piperazine ring, preferably an N-acetylpiperazinyl group.

In a preferred embodiment,  $-NR_4R_5$  and/or  $-NR_6R_7$  of Formula I is a substituted or unsubstituted morpholinyl group. In a highly preferred embodiment thereof,  $R_6$  and  $R_7$  are both hydrogen. In a most preferred embodiment,  $R_2$  and  $R_3$  are both hydrogen and  $--NR_4R_5$  forms an unsubstituted morpholinyl group.

In a preferred embodiment, NR<sub>4</sub>R<sub>5</sub> and/or NR<sub>6</sub>R<sub>7</sub> of Formula I is a piperidine ring, preferably a substituted piperidine ring, most preferably 4-hydroxypiperidine.

In a highly preferred embodiment of any of the structures of the present invention,  $R_1$ ,  $R_6$  and  $R_7$  of Formula I are each methyl.

In another preferred embodiment of the compounds of the invention, Z is C-R<sub>11</sub> or N and W, Y and Z are each selected from C-R<sub>8</sub>, C-R<sub>9</sub> and C-R<sub>10</sub>. In one embodiment of the latter, X is C-R<sub>9</sub> or N and W, Y and Z are each

selected from C-R<sub>8</sub>, C-R<sub>10</sub> and C-R<sub>11</sub>. In a preferred embodiment of the latter Y is C-R<sub>10</sub> or N and W, X, and Z are each selected from CH, C-R<sub>8</sub>, C-R<sub>9</sub> and C-R<sub>11</sub>. In a most preferred embodiment thereof, W, X, Y and Z are each selected from CH, C-R<sub>8</sub>, C-R<sub>9</sub>, C-R<sub>10</sub> and C-R<sub>11</sub>, most preferably where W X, Y and Z are each CH (thereby forming a phenyl ring).

5

10

15

20

25

30

In another preferred embodiment of the compounds of the invention,  $R_2$  and  $R_3$  are selected from hydrogen, lower alkyl (1-6 carbon) or aryl. In a further preferred embodiment of the compounds of the invention,  $R_1$  is selected from hydrogen, alkyl, cycloalkyl, unsubstituted or substituted phenyl, unsubstituted or substituted benzyl, -methylpyridine, -ethylpyridine, -methylindole, -ethylindole, alkoxyethyl-, hydroxyethyl-, N,N-dialkyl-ethyl, N,N-dialkyl-propyl, -methylpyrrole, -ethylpyrrole, -methylfuran, -ethylfuran, -alkylmorpholine, -alkylpiperizine, -alkypiperidine, and -alkylpyrrolidine and wherein  $R_2$  and  $R_3$  are selected from hydrogen, lower alkyl (1-6 carbons) and aryl.

In another preferred embodiment of the compounds of the invention,  $R_4$  and  $R_5$  are each selected from hydrogen, alkyl, cycloalkyl, unsubstituted or substituted phenyl, unsubstituted or substituted benzyl, -methylpyridine, - ethylpyridine, -methylindole, -ethylindole, alkoxyethyl-, hydroxyethyl-, N,N-dialkyl-ethyl-, N,N-dialkyl-propyl-, -methylpyrrole, -ethylpyrrole, -methylfuran, - ethylfuran, -alkylmorpholine, -alkylpiperizine, -alkypiperidine, and - alkylpyrrolidine, and wherein  $R_2$  and  $R_3$  are selected from hydrogen, lower alkyl (1-6 carbon) and aryl.

In another preferred embodiment of the compounds of the invention,  $R_6$  and  $R_7$  are selected from alkyl, cycloalkyl, unsubstituted or substituted phenyl, unsubstituted or substituted benzyl, -methylpyridine, -ethylpyridine, -methylindole, -ethylindole, alkoxyethyl-, hydroxyethyl-, N,N-dialkyl-ethyl, N,N-dialkyl-propyl, -methylpyrrole, -ethylpyrrole, -methylfuran, -ethylfuran, -

5

10

15

20

alkylmorpholine, -alkylpiperizine, -alkypiperidine, and -alkylpyrrolidine, and  $R_2$  and  $R_3$  are each selected from hydrogen, lower alkyl (1-6 carbons) and aryl.

In other preferred embodiments, R<sub>2</sub> and R<sub>3</sub> are selected from hydrogen, lower alkyl (1-6 carbon) and aryl, wherein  $R_1$ ,  $R_4$  and  $R_5$  are each selected from hydrogen, alkyl, cycloalkyl, unsubstituted or substituted phenyl, unsubstituted or substituted benzyl, -methylpyridine, -ethylpyridine, methylindole, -ethylindole, alkoxyethyl-, hydroxyethyl-, N,N-dialkyl-ethyl-, N,Ndialkyl-propyl-, -methylpyrrole, -ethylpyrrole, -methylfuran, -ethylfuran, alkylmorpholine, -alkylpiperizine, -alkypiperidine, and -alkylpyrrolidine, and wherein R<sub>2</sub> and R<sub>3</sub> are selected from hydrogen, lower alkyl (1-6 carbon) or aryl and wherein R<sub>6</sub> and R<sub>7</sub> are selected from alkyl, cycloalkyl, unsubstituted or substituted phenyl, unsubstituted or substituted benzyl, -methylpyridine, ethylpyridine, -methylindole, -ethylindole, alkoxyethyl-, hydroxyethyl-, N,Ndialkyl-ethyl, N,N-dialkyl-propyl, -methylpyrrole, -ethylpyrrole, -methylfuran, ethylfuran, -alkylmorpholine, -alkylpiperizine, -alkypiperidine, and alkylpyrrolidine.

In another preferred embodiment of the compounds of the invention having Formula 1,  $R_2$  and  $R_3$  are each selected from hydrogen and alkyl, and wherein  $R_4$  and  $R_6$  are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C - \\ R_{16} \end{bmatrix}_{n} - NR_{17}R_{18}$$

wherein n is 2 ,3 or 4 and wherein one or both of R<sub>5</sub> and R<sub>7</sub> is alkyl, preferably both, and in either case most preferably wherein the alkyl is methyl.

In another preferred embodiment of Formula I,  $R_1$  is alkyl while  $R_2$  and  $R_3$  are each selected from hydrogen and alkyl, and  $R_4$  and  $R_6$  are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C \\ R_{16} \end{bmatrix}_{n} - NR_{17}R_{18}$$

5

10

15

20

wherein n is 2, 3 or 4 and one or both of  $R_5$  and  $R_7$  is alkyl, preferably both, and in either case most preferably wherein the alkyl is methyl.

In another preferred embodiment of Formula 1,  $R_2$  and  $R_3$  are each selected from hydrogen and alkyl while  $R_4$  and  $R_6$  are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ C \\ R_{16} \end{bmatrix}_{n}^{O} R_{17}$$

where n is 2, 3 or 4 and one or both of R5 and R7 is alkyl, preferably both, and in either case most preferably wherein the alkyl is methyl.

In another preferred embodiment of Formula 1,  $R_2$  and  $R_3$  are each selected from hydrogen and alkyl, wherein  $R_4$  and  $R_6$  are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C \\ R_{16} \end{bmatrix}_{n}^{O} R_{17}$$

where n is 2, 3 or 4 and at least one of  $R_5$  and  $R_7$  is alkyl, preferably both, and in either case most preferably wherein the alkyl is methyl.

In another preferred embodiment of Formula 1, R<sub>2</sub> and R<sub>3</sub> are each selected from hydrogen and alkyl, and R<sub>4</sub> and R<sub>6</sub> are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C \\ R_{16} \end{bmatrix}_{n} \begin{bmatrix} O \\ R_{17} \\ -N \\ R_{19} \end{bmatrix}$$

where n is 2, 3 or 4 and at least one of R5 and R7 is alkyl, preferably both, and in either case most preferably wherein the alkyl is methyl.

In another preferred embodiment of Formula 1, R2 and R3 are each selected from hydrogen and alkyl, and R4 and R6 are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C \\ R_{16} \end{bmatrix}_{n}^{O} = \begin{bmatrix} 0 \\ -N \\ -S \\ R_{17} \\ R_{19} \end{bmatrix}$$

wherein n is 2, 3 or 4 and wherein one or both of  $R_5$  and  $R_7$  is alkyl, preferably both, and in either case most preferably wherein the alkyl is methyl.

In another preferred embodiment of Formula 1,  $R_2$  and  $R_3$  are each be hydrogen or alkyl,  $R_4$  and  $R_6$  are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C - \\ R_{16} \end{bmatrix}_{n} -O -R_{17}$$

5

10

15

20

25

where n is 2, 3 or 4 and one or both of  $R_5$  and  $R_7$  is alkyl, and in either case most preferably wherein the alkyl is methyl.

In separate embodiments, the present invention encompasses compounds having a structure found in Table 1 including salts thereof, a compound having a structure of Table 2 including salts thereof, a compound having a structure of Table 3 including salts thereof, a compound having a structure of Table 4 including salts thereof, a compound having a structure of Table 5 including salts thereof, a compound having a structure of Table 6 including salts thereof, a compound having a structure of Table 7 including salts thereof, a compound having a structure of Table 8 including salts thereof, a compound having a structure of Table 9 including salts thereof, a compound having a structure of Table 11 including salts thereof, a compound having a structure of Table 12 including salts thereof, a compound having a structure of Table 13 including salts thereof, a compound having a structure of Table 14 including salts thereof, a compound having a structure of Table 15 including salts thereof, a compound having a structure of Table 16 including salts thereof, a compound having a structure of Table 17 including salts thereof, and a compound having a structure of Table 18 including salts thereof, and in each case most preferably pharmaceutically acceptable salts thereof. It is to be understood that each of the structures defined in each of these tables is considered to be a separate and preferred embodiment of the present invention.

In another aspect, the present invention relates to compositions of any of the compounds of the invention, preferably wherein such compound is

present in a pharmaceutically acceptable carrier and in a therapeutically effective amount. Such compositions will generally comprise an amount of such compound that is not toxic (i.e., an amount that is safe for therapeutic uses).

5

10

15

20

25

30

In accordance with the foregoing, the present invention is directed to use of the compounds of the invention as active ingredients for medicaments, in particular for medicaments useful for the treatment of tumors. The compounds of the invention will thus be present in pharmaceutical compositions containing compounds of formula I as active ingredients, in admixture with pharmaceutically acceptable vehicles and excipients, which includes any pharmaceutical agent that does not itself induce the production of antibodies harmful to the individual receiving the composition, and which may be administered without undue toxicity. Pharmaceutically acceptable carriers include, but are not limited to, liquids such as water, saline, glycerol and ethanol, and the like, including carriers useful in forming sprays for nasal and other respiratory tract delivery or for delivery to the ophthalmic system. A thorough discussion of pharmaceutically acceptable carriers, diluents, and other excipients is presented in REMINGTON'S PHARMACEUTICAL SCIENCES (Mack Pub. Co., N.J. current edition). Use of such carriers is well known to those skilled in the art and will not be discussed further herein.

Also in accordance with the foregoing, the present invention relates to a method for preventing or treating a disease associated with a change in levels of expression of particular sets of genes in a mammal comprising administering to said mammal an effective amount of a compound of the invention.

In another aspect, the present invention relates to a method for preventing or treating a disorder modulated by altered gene expression, wherein the disorder is selected from the group consisting of cancer, cardiovascular disorders, arthritis, osteoporosis, inflammation, periodontal

disease and skin disorders, comprising administering to a mammal in need of such treatment or prevention a therapeutically effective amount of a compound of the invention.

In a preferred embodiment thereof, the disorder is cancer, more preferably colon cancer, most preferably adenocarcinoma, and the treatment prevents, arrests or reverts tumor growth, metastasis or both.

The compounds of the invention will commonly exert a therapeutic effect by modulation of one or more genes found in a cell, especially a mammalian cell, such as a cancer cell, preferably colon cancer and most preferably adenocarcinoma. Thus, a compound, or compounds, of the invention can be used to determine or demarcate a set of genes by determining modulation of such set of genes by one or more compounds of the invention. For example, where a set of genes is found to be up-regulated in cancer cells versus otherwise normal cells, especially normal cells of the same tissue or organ as the cancer cells, a set of genes can be determined by their common property of being modulated (based on a change in expression of the genes, such as a change in rate or amount of RNA transcribed or the amount of polypeptide produced by said expression) by contacting such genes, or a cell containing such genes, with one or more of the compounds of the invention. The extent of such modulation may, of course, be related to the amount of said compound, or compounds, used in the contacting. Such modulation may include the increased expression of all the determined genes (i.e., the genes of the set), the decreased expression of all genes of the set, or the increase in expression of some of the genes of the set and decreased expression of others. Thus, a gene not modulated by the test compound (the compound used in contacting the genes or cell containing them) is not considered a member of the set.

30

5

10

15

20

25

Thus, the present invention relates to a gene set wherein expression of each member of said gene set is modulated as a result of contacting said

gene set with a compound of the invention. In specific embodiments, expression of each member of said gene set is increased as a result of said contacting or is decreased as a result of said contacting. In another preferred embodiment, the gene set is present in a cell. Such a gene set will commonly be related to a specific disease process, such as a set of genes all of which are modulated by a compound of the invention wherein such compound has a specific therapeutic effect, such as being an anti-neoplastic agent.

In another aspect, the present invention relates to a method for identifying an agent that modulates the expression of a gene set of the invention, comprising:

- (a) contacting, or otherwise using, a compound, such as a test compound, a test system, such as a source of genes or polynucleotides, for example, those found to be related to a given disease or disorder, or a set that is modulated by a given compound, or group of compounds, especially where these are found in a cell, so that the cell represents the test system, containing one or more polynucleotides corresponding to each of the members of the gene set of the invention under conditions wherein the members of said gene set are being expressed;
- (b) determining a change in expression of each of said one or more polynucleotides of step (a) as a result of said treatment;

wherein said change in expression of step (b) indicates modulation of the members of said gene set by the test compound thereby identifying a test compound that modulates the expression of said gene set.

25

5

10

15

20

In one embodiment, the cell is a naturally derived cell that contains genes of a gene set or may be a recombinant cell engineered to comprise the genes or polynucleotides of the gene set. In an alternative embodiment, the test system may comprise the genes or polynucleotides in a cell-free system.

30

In a related aspect, the present invention provides a method for identifying a test compound that modulates the expression of a gene set, such as a gene set of the invention, comprising:

(a) contacting a test compound with one or more polynucleotides corresponding to each of the members of the gene set of the invention under conditions wherein the members of said gene set are being expressed;

5

10

15

20

25

30

(b) determining a change in expression of each of said one or more polynucleotides of step (a) as a result of said contacting;

wherein said change in expression of step (b) indicates modulation of the members of said gene set thereby identifying a test compound that modulates the expression of said gene set.

"corresponding genes" or herein. "corresponding As used polynucleotides" or "polynucleotides corresponding to genes" refers to polynucleotides and/or genes that encode an RNA that is at least 90% identical, preferably at least 95% identical, most preferably at least 98% identical, and especially identical, to an RNA encoded by one of the genes disclosed herein in Table 19. Such genes will also encode the same polypeptide sequence, but may include differences in such amino acid sequences where such differences are limited to conservative amino acid substitutions, such as where the same overall three dimensional structure, is maintained. A "corresponding gene" includes splice variants thereof.

Because a polynucleotide or gene used in the methods of the invention "corresponds to" a gene present in one of the gene sets of the invention, such as genes identified in Table 19, such polynucleotide or gene encodes an RNA (processed or unprocessed, including naturally occurring splice variants and alleles) that is at least 90% identical, preferably at least 95% identical, most preferably at least 98% identical to, and especially identical to, an RNA that would be encoded by, or be complementary to, such as by hybridization with, a gene of Table 19, or genes of any gene set identified according to the invention. Polynucleotides encoding the same proteins as any of these genes,

regardless of the percent identity of the sequences of such genes and/or polynucleotides, are also specifically contemplated by any of the methods of the present invention. The polynucleotides used in the methods of the invention also include any open reading frames, as defined herein, present therein. As used herein, the term "open reading frame" (or ORF) means a series of triplets coding for amino acids without any termination codons and is a sequence (potentially) translatable into protein.

10

15

20

25

30

The polynucleotides useful in the methods of the invention may be genomic in nature and thus represent the sequence of an actual gene, such as a human gene, or may be a cDNA sequence derived from a messenger RNA (mRNA) and thus represent contiguous exonic sequences derived from a corresponding genomic sequence, or they may be wholly synthetic in origin for purposes of practicing the processes of the invention. Because of the processing that may take place in transforming the initial RNA transcript into the final mRNA, the sequences disclosed herein may represent less than the full genomic sequence. They may also represent sequences derived from ribosomal and transfer RNAs. Consequently, the gene as present in the cell (and representing the genomic sequence) and the polynucleotide transcripts disclosed herein, including cDNA sequences, may be identical or may be such that the cDNAs contain less than the full genomic sequence. Such genes and cDNA sequences are still considered "corresponding sequences" (as defined elsewhere herein) because they both encode the same or related RNA sequences (i.e., related in the sense of being splice variants or RNAs at different stages of processing). Thus, by way of non-limiting example only, a gene that encodes an RNA transcript, which is then processed into a shorter mRNA, is deemed to encode both such RNAs and therefore encodes an RNA complementary to (using the usual Watson-Crick complementarity rules), or that would otherwise be encoded by, a cDNA (for example, a sequence as disclosed herein). Thus, the sequences disclosed herein correspond to genes contained in the cancerous cells (here, breast cancer) and are used to determine gene activity or expression because they represent the same

sequence or are complementary to RNAs encoded by the gene. Such a gene also includes different alleles and splice variants that may occur in the cells used in the methods of the invention, such as where recombinant cells are used to assay for anti-neoplastic agents and such cells have been engineered to express a polynucleotide as disclosed herein, including cells that have been engineered to express such polynucleotides at a higher level than is found in non-engineered cancerous cells or where such recombinant cells express such polynucleotides only after having been engineered to do so. Such engineering includes genetic engineering, such as where one or more of the polynucleotides disclosed herein has been inserted into the genome of such cell or is present in a vector.

Such cells, especially mammalian cells, may also be engineered to express on their surfaces one or more of the polypeptides of the invention for testing with antibodies or other agents capable of masking such polypeptides and thereby removing the cancerous nature of the cell. Such engineering includes both genetic engineering, where the genetic complement of the cells is engineered to express the polypeptide, as well as non-genetic engineering, whereby the cell has been physically manipulated to incorporate a polypeptide of the invention in its plasma membrane, such as by direct insertion using chemical and/or other agents to achieve this result.

In a preferred embodiment of such method, the determined change in expression is a decrease in expression of said one or more polynucleotides or a decrease in said expression. In other preferred embodiments, the determined change in expression is a change in transcription of said one or more polynucleotides or a change in activity of a polypeptide, or expression product, encoded by said polynucleotide, including a change in the amount of said polypeptide synthesized, such as by a cell. The term "expression product" means that polypeptide or protein that is the natural translation product of the gene and any nucleic acid sequence coding equivalents resulting from genetic code degeneracy and thus coding for the same amino acid(s).

In additional preferred embodiments, said one or more polynucleotides are present in a cell, preferably a cancer cell, more preferably a colon and breast cancer cell, and most preferably where the coloncancer cell is an adenocarcinoma cancer cell. In another preferred embodiment of the invention, the cell is a recombinant cell engineered to contain said set of genes.

5

10

15

20

25

30

Such methods serve to identify other compounds that have like activity, including expected therapeutic activity, as the compounds of the invention and thus serve as the basis for large scale screening assays for therapeutic compounds. As a result, one or more compounds of the invention can be utilized to determine the presents of gene sets and subsets within the genome of a cell. Thus, the set of all genes modulated by a group of structurally related compounds of the invention can form a gene set while the different sets of genes regulated by each compound of a group will form a subset. By way of non-limiting example, where a structurally related group of 5 of the compounds of the invention (all having generally the structure of Formula I) modulate (by increasing or decreasing) expression of determined genes 1-20, this latter group of genes forms a gene set. Further examination then determines that genes 1-6 are modulated by compound A, genes 7-10 are modulated by compound B, genes 2-4 and 9-12 are modulated by compound C, genes 10-20 are modulated by compound D and the even numbered genes are modulated by compound E. Each of these groups of genes, such as the genes modulated by compound C, is considered a subset of the gene set of genes 1-20. In an analogous manner, the genes modulated by compound E can be themselves further subdivided into at least 2 subsets wherein one subset is made up of the genes whose expression is increased by compound E while the other subset is made up of genes whose expression is decreased by compound E, thus yielding subsets of subsets. It should be noted that within the context of the present invention, it is not necessary to identify subsets and that each so-called subset is, in its own right, a gene set

as used in the invention. The identification of sets and subsets is thus a function of the extent that a user of the methods of the invention wishes to determine modulation of genes resulting from contacting of one or more compounds of the invention. Thus, the genes modulated by a single compound form a gene set and it is not necessary, in carrying out the methods of the invention, to compare different groups of genes for modulation by more than one compound but this may, of course, be done.

5

10

15

In accordance with the foregoing, the present invention relates to a set of genes comprising a plurality of subsets of genes wherein each subset of said plurality is a gene set identified by the methods of the invention. The present invention also relates to compounds identified as having activity using the methods of the invention, such as novel compounds not specifically described herein by structure but which have been identified by their ability to modulates one or more gene sets modulated by compounds of the invention.

In a preferred embodiment, the present invention encompasses the gene sets and subsets of the genes identified in Table 19.

The present invention comprises also processes for the preparation of compounds of formula I, and the relative key intermediates.

# **Compound Preparation:**

The compounds of the invention can be prepared using a variety of procedures known in the art. The starting materials used in preparing the compounds of the invention are known, made by known methods, or are commercially available. Particularly preferred syntheses are described in the following general reaction schemes.

## Scheme 1:

5

10

15

The dichloro compound 1 is either commercially available or can be synthesized using methods known in the literature.

- 1. Shaikh I. A. et al, J. Med. Chem, 29(8), 1329-1340, (1986)
  - 2. Vlderrama el al, Syn. Comm., 27(12), 2143-2157, (1997)
  - 3. Chu, Kwong-Yung; et al. Journal of the Chemical Society, Perkin Transactions 1: Organic and Bio-Organic Chemistry (1972-1999) (1978)
- 20 4. Matsuhisa A. et al, Patent WO 01/60803 A1

The compound 1 is reacted with an amine in an appropriate solvent to provide the corresponding derivative 2. The compound 2 is then reacted with an appropriate 2-halo, 2-substituted acetyl halide to obtain the corresponding 3 derivatives. A reaction of crude or purified compound 3 with an amine gives compound 4. Compound 4 with or without isolation is treated with an amine in a suitable solvent at an appropriate temperature to afford compound 5.

In the same way, independent and selective modification of  $R_1$ ,  $R_2$ ,  $R_3$ ,  $R_4$ ,  $R_5$ ,  $R_6$ , and  $R_7$  using methods known in the literature readily affords additional compounds of formula I. Thus, compounds for which no separate preparation is provided herein are made by methods known in the literature or are of common knowledge to the skilled artisan.

The skilled artisan will recognize that some reactions are best carried out when another potentially reactive functionality on the molecule is masked or protected, thus avoiding any undesirable side reactions and/or increasing the yield of the reaction. Often protecting groups are used to accomplish such increased yields or to avoid the undesired reactions. Such reactions are well within the ability of the skilled artisan. Some examples are found in T. Greene, Protecting Groups in Organic Synthesis.

In addition, it is to be appreciated that one optical isomer may have favorable properties over the other and thus the disclosure of a racemic mixture within the present invention may also include either optically active isomer if such isomer has advantageous physiological activity in accordance with the methods of the invention.

25

5

10

15

20

## Example-A1

# 2-Chloro-3-methylamino-[1,4]naphthoquinone

5

10

To a solution of 22.7g (100mmol, 1equivalent) of 2,3-dichloro-[1,4]naphthoquinone in 350 ml of anhydrous THF was added 200ml of 2.0M methyl amine in THF (200mmol, 2 equivalents). To the mixture was added 34 ml of N, N-diisopropylethylamine (200mmol, 2 equivalents) and it was shaken at room temperature for overnight (16-20 hours).

The red precipitates formed were filtered and washed with ether. The residue was again washed with water and ether. The solid was dried under vacuum. The filtrate was checked for the desired product, and then THF was evaporated. The residue was recrystallized with dichloromethane/ether. The titled compound was collected as a red solid (18g, Yield 74%).

20

15

25

In a process analogous to Example A1 using appropriate starting materials, the corresponding compounds are prepared as follows:

butyl ester  A3 2-(1-Benzyl-piperidin-4-ylamino)-3-chloro-[1,4]naphthoquinone  A4 2-(3-Chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-ylamino)-3-phenyl-propionic acid tert-butyl ester  A5 2-(4-Acetyl-phenylamino)-3-chloro-[1,4]naphthoquinone  A6 2,6-Dichloro-5,8-dihydroxy-3-(3-{4-[3-(6-oxo-6H-2,10b-diaza-aceanthrylen-5-ylamino)-propyl]-piperazin-1-yl}-propylamino)- [1,4]naphthoquinone  A7 2-Chloro-3-(2-pyridin-4-yl-ethylamino)-[1,4]naphthoquinone  A8 2-Chloro-3-(3-(4-[3-(6-oxo-6H-2,10b-diaza-aceanthrylen-5-ylamino)-propyl]-piperazin-1-yl}-propylamino)-[1,4]naphthoquinone  A9 2-Chloro-3-(3-morpholin-4-yl-propylamino)-[1,4]naphthoquinone  A10 2-Chloro-3-(4-dimethylamino-benzylamino)-[1,4]naphthoquinone  A11 2-Chloro-3-(4-dimethylamino-phenylamino)-[1,4]naphthoquinone  A12 2-Chloro-3-[2-(1,2,2,6,6-pentamethyl-piperidin-4-yl)-ethylamino]- [1,4]naphthoquinone  A13 2-Chloro-3-[3-(2-oxo-pyrrolidin-1-yl)-propylamino]-[1,4]naphthoquinone  A14 2-Chloro-3-[3-(methyl-phenyl-amino)-propylamino]-[1,4]naphthoquinone  A15 2-Chloro-3-[(4-methyl-phenyl-amino)-propylamino]-[1,4]naphthoquinone  A16 2-Chloro-3-[(4-methyl-pyridin-2-yl)-phenyl-methyl]-amino}- [1,4]naphthoquinone  A17 2-Chloro-3-flid-methyl-pyridin-2-yl)-phenyl-methyl]-amino}- [1,4]naphthoquinone  A18 2-Chloro-5,8-dihydroxy-3-(3-[4-[3-(6-oxo-6H-2,10b-diaza-aceanthrylen-5-ylamino)-propyl]-piperazin-1-yl]-propylamino)-[1,4]naphthoquinone  A18 4-(3-Chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-ylamino)-benzoic acid	Example	Chemical Name
A3 2-(1-Benzyl-piperidin-4-ylamino)-3-chloro-[1,4]naphthoquinone A4 2-(3-Chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-ylamino)-3-phenyl-propionic acid tert-butyl ester A5 2-(4-Acetyl-phenylamino)-3-chloro-[1,4]naphthoquinone A6 2,6-Dichloro-5,8-dihydroxy-3-(3-{4-[3-(6-oxo-6H-2,10b-diaza-aceanthrylen-5-ylamino)-propyl]-piperazin-1-yl}-propylamino)- [1,4]naphthoquinone A7 2-Chloro-3-(2-pyridin-4-yl-ethylamino)-[1,4]naphthoquinone A8 2-Chloro-3-(3-{4-[3-(6-oxo-6H-2,10b-diaza-aceanthrylen-5-ylamino)-propyl]-piperazin-1-yl}-propylamino)-[1,4]naphthoquinone A9 2-Chloro-3-(3-morpholin-4-yl-propylamino)-[1,4]naphthoquinone A10 2-Chloro-3-(4-dimethylamino-benzylamino)-[1,4]naphthoquinone A11 2-Chloro-3-(4-dimethylamino-phenylamino)-[1,4]naphthoquinone A12 2-Chloro-3-[2-(1,2,2,6,6-pentamethyl-piperidin-4-yl)-ethylamino]- [1,4]naphthoquinone A13 2-Chloro-3-[3-(2-oxo-pyrrolidin-1-yl)-propylamino]-[1,4]naphthoquinone A14 2-Chloro-3-[3-(methyl-phenyl-amino)-propylamino]-[1,4]naphthoquinone A15 2-Chloro-3-[3-(methyl-phenyl-amino)-propylamino]-[1,4]naphthoquinone A16 2-Chloro-3-[3-(methyl-phenyl-amino)-propylamino]-[1,4]naphthoquinone A17 2-Chloro-3-phenylamino-[1,4]naphthoquinone A18 2-Chloro-5,8-dihydroxy-3-(3-{4-[3-(6-oxo-6H-2,10b-diaza-aceanthrylen-5-ylamino)-propyl]-piperazin-1-yl}-propylamino)-[1,4]naphthoquinone A19 4-(3-Chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-ylamino)-benzoic acid	A2	(3-Chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-ylamino)-acetic acid tert-

ethyl ester	A19	4-(3-Chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-ylamino)-benzoic acid
3.1.7. 33.01		ethyl ester

#### Example-B1

# 2-Bromo-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methylacetamide

5

20

To a solution of 8g of 2-chloro-3-methylamino-[1,4]naphthoquinone (36mmol) in 400 ml 1,4-dioxane was added 10g of potassium carbonate (72mmol). The mixture was heated until the starting material was completely dissolved. To the solution, 12.5ml of bromoacetyl bromide (144mmol) was added and refluxed for 1 hour. Inorganic materials were filtered and washed thoroughly with dichloromethane. The filtrate was evaporated and the residue was purified by flash silica gel column using 75:25- hexanes: ethyl acetate. The compound was collected as yellow oil. (10g, Yield 80%).

In a process analogous to Example B1 using appropriate 2-chloro-3-substituted amino [1,4] naphthoquinone (Example A) and corresponding acid bromide following compounds are prepared.

2-Bromo-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-acetamide 2-Bromo-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methylacetamide

2-Bromo-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-25 propionamide

## Example 1 (Compound 1, Table 1)

2-Dimethylamino-N-(3-dimethylamino-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-acetamide

5

10

To a solution of 2.5g of 2-bromo-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-acetamide (7mmol, 1equivalent) in 200ml of ethyl acetate was added 28 ml of 2.0M dimethylamine solution in tetrahydrofuran (56mmol, 8 equivalents). The amine solution was added in two portions stirring for 15 min after each addition. The solvent was then evaporated and then sample was purified on a silica gel column using initially ethyl acetate and then 10-20 % methanol in ethyl acetate. The solvent was evaporated and the residue was dissolved in DMSO. It was then purified further on preparative LCMS using 0.1% NH<sub>4</sub>OH in water/acetonitrile as mobile phase. (592mg, Yield 26%); H<sup>1</sup> NMR (400MHz, CDCl<sub>3</sub>) 2.97 (s, 6H), 3.08 (s, 3H), 3.20 (s, 6H), 3.64 (s, 2H), 7.62 (m, 2H), 7.95 (t, 2H).

20

25

15

#### Compound 2-119 (Table 1)

In a process analogous to Example 1 (Table 1) using appropriate chloro-bromo naphthoquinone (Example B) and the corresponding secondary amine, following compounds are prepared as shown in Table 1.

Example-C1

2-Chloro-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methylacetamide

To a solution of 10g of 2-chloro-3-methylamino-[1,4]naphthoquinone (45 mmol) in 250 mL of dioxane was added 172 mL of chloroacetyl chloride (48 equivalents). The reaction was heated at 85° C for 16 hours. The solvent was evaporated and the material was purified on silica gel using DCM and hexanes as solvents. The pure fractions were combined and the solvent was evaporated. The product was collected as a yellow/brown solid. (12.1g, Yield 90%).

5

10

15

In a process analogous to Example C1 using appropriate 2-chloro-3-substituted amino-[1,4]naphthoquinone (Example A) and corresponding acid chloride following compounds are prepared.

Example	Chemical Name
C2	2-Chloro-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)- acetamide
C3	2-Chloro-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)- propionamide
C4	2-Chloro-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-2-phenyl-acetamide
C5	2-Chloro-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-propionamide
C6	2-Chloro-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-2-phenyl-acetamide

Example D1

2-Chloro-N-(3-dimethylamino-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-acetamide

5

10

15

To a solution of 19g of 2-chloro-N-(3-chloro-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-acetamide (63 mmol) in 200 mL of ethyl acetate was added slowly 22 mL of N, N-diisopropylethylamine (2 equivalents). 70 mL of 2.0M solution of dimethylamine in terahydrofuran (2.25 equivalents) was diluted with 100 mL of ethyl acetate. This amine solution was added slowly to the reaction mixture over one hour at room temperature. After stirring for an additional hour, the reaction was filtered and the solid material was washed with ethyl acetate. The filtrate was concentrated and purified using a normal phase column chromatography, and ethyl acetate and hexanes as solvents. The pure fractions were combined and the solvent was evaporated. The product was collected as a red solid. (10.1g, Yield- 52%). H<sup>1</sup> NMR (400MHz, CDCl3): 3.09 (s, 3H), 3.23 (s, 6H), 4.01 (q, 2H), 7.65-7.77 (m, 2H), 8.03 (d, 1H), 8.08 (d, 1H).

In a process analogous to Example D1 using appropriate dichloro naphthoquinone derivatives (Example C) and corresponding secondary amine, the following compounds are prepared.

25

20

Example	Chemical Name
D2	2-Chloro-N-(3-dimethylamino-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-acetamide
D3	2-Chloro-N-(3-dimethylamino-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)- propionamide
D4	2-Chloro-N-(3-dimethylamino-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-2-phenyl-acetamide
D5	2-Chloro-N-(3-dimethylamino-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-propionamide
D6	2-Chloro-N-(3-dimethylamino-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-2-phenyl-acetamide

### Example 2 (Compound 1, Table 2)

5

10

15

2-Diethylamino-N-(3-dimethylamino-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-acetamide

To a solution of 0.54 g of 2-chloro-N-(3-dimethylamino-1,4-dioxo-1,4-dihydro-naphthalen-2-yl)-N-methyl-acetamide (1.8 mmol) in 20 mL of ethyl acetate was added 2.2 mL of ethylamine (21.6mmol, 12 equiv). The mixture was stirred at room temperature for two hours. The reaction mixture was then filtered and the solid was washed with ethyl acetate until all red material was dissolved. The red filtrate was concentrated and purified on a normal phase column chromatography using ethyl acetate. The pure fractions were combined and concentrated. The solid was then dissolved in 20mL of DCM and 12 equiv of 1.0M HCl in diethyl ether was added to produce hydrochloride salt. Organic solvents were evaporated and the product was dissolved in 5.0

mL of HPLC grade water. This material was freeze dried to give 0.42 g of final product as its hydrochloride salt. (Yield 62%). H<sup>1</sup> NMR (400MHz, DMSO, D2O) 1.14 (t, 6H), 2.97 (s, 3H), 3.08-3.0 (m, 10H), 3.80 (d, 1H), 4.02 (d, 1H), 7.7-7.9 (m, 2H), 7.89-8.0 (m, 2H).

5

## Compounds 2-119 (Table 2)

In a process analogous to Example 2 using appropriate chloro naphthoquinone (Example D) and the corresponding secondary amine, compounds are prepared as shown in Table 2.

Table 1

## WHAT IS CLAIMED IS:

## 1. A compound having the structure of Formula (I)

5

Formula i

wherein

W, X, Y and Z are each selected from a bond, CH, C-R<sub>8</sub>, C-R<sub>9</sub>, C-R<sub>10</sub>, C-R<sub>11</sub>, O (oxygen), N (nitrogen) and S (sulfur) and no more than two of W, X, Y and Z are simultaneously O, N and S;

10

wherein,  $R_8$ ,  $R_9$ ,  $R_{10}$ ,  $R_{11}$  are each selected from hydrogen, hydroxyl, sulfhydryl, alkoxy, thioalkoxy, alkyl, halogen, CN, CF<sub>3</sub>, NO<sub>2</sub>, COOR<sub>12</sub>, CONR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>COR<sub>13</sub>, NR<sub>12</sub>SO<sub>2</sub>R<sub>13</sub> and NR<sub>14</sub>CONR<sub>12</sub>R<sub>13</sub>;

15

wherein  $R_{12}$ ,  $R_{13}$  and  $R_{14}$  are each selected from hydrogen, alkyl, heteroalkyl, aryl, arylalkyl, heteroaryl, heteroarylalkyl, cycloalkyl and heterocycloalkyl;

and wherein NR<sub>12</sub>R<sub>13</sub> is further optionally selected from substituted and unsubstituted mono or bicyclic ring with one to four heteroatoms such as N, O and S;

and further wherein  $R_{12}$  and  $R_{14}$  may form a 4, 5, 6 or 7-membered cyclic ring system;

20

wherein R<sub>1</sub>, R<sub>2</sub>, R<sub>3</sub>, R<sub>4</sub>, and R<sub>5</sub> are each selected from hydrogen, alkyl, substituted or unsubstituted phenyl, substituted or unsubstituted polyaromatic ring, substituted or unsubstituted heteroaromatic ring having hetero atom(s) selected from N, O and S, substituted or unsubstituted aralkyl, substituted or unsubstituted, cyclic or polycyclic, hydrocarbon and substituted or unsubstituted, monoheterocycle or polyheterocycle (of 3-8 atoms per ring) having one to four hetero atoms selected from N, O, and S; and

and wherein said substitutions are selected from hydrogen, hydroxyl, sulfhydryl, alkoxy, thioalkoxy, alkyl, halogen, CN, CF<sub>3</sub>, NO<sub>2</sub>, COOR<sub>12</sub>, CONR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>COR<sub>13</sub>, NR<sub>12</sub>SO<sub>2</sub>R<sub>13</sub>, and NR<sub>14</sub>CONR<sub>12</sub>R<sub>13</sub>;

5

wherein R<sub>12</sub>, R<sub>13</sub> and R<sub>14</sub> are each selected from hydrogen, alkyl, heteroalkyl, aryl, arylalkyl, heteroaryl, heteroarylalkyl, cycloalkyl, and heterocycloalkyl;

10

and wherein NR<sub>12</sub>R<sub>13</sub> may form a substituted and unsubstituted, mono or bicyclic ring with one to four heteroatoms selected from N, O and S;

and wherein  $R_{12}$  and  $R_{14}$  may form a 4, 5, 6 or 7-member cyclic ring system;

and wherein R<sub>1</sub>, R<sub>4</sub>, R<sub>5</sub>, R<sub>6</sub> and R<sub>7</sub> are also selected from:

$$\begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_{n} = NR_{17}R_{18}; \begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_{n} = NR_{19}COR_{17}; \begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_{n} = NR_{19}CONR_{17}R_{18}; \begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_{n} = NR_{19}CONR_{17}R_{18}; \begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_{n} = OCONR_{17}R_{18}; \begin{bmatrix} R_{15} \\ R_{16} \end{bmatrix}_{n} = OR_{17};$$

15

where n is 2, 3 or 4 and  $R_{15}$ ,  $R_{16}$ ,  $R_{17}$ ,  $R_{18}$  and  $R_{19}$  are each selected from hydrogen, alkyl, cycloalkyl, unsubstituted or substituted aryl, unsubstituted or substituted heteroaryl, and unsubstituted or substituted alkylaryl;

> NR<sub>17</sub>R<sub>18</sub> may form a substituted or unsubstituted, mono or bicyclic ring with one to four heteroatoms selected from N, O and S;

> and wherein R<sub>17</sub> and R<sub>19</sub> may form a 4, 5, 6 or 7-membered cyclic ring system;

> and wherein R<sub>4</sub> may also be selected from -COR<sub>17</sub>, -SO<sub>2</sub>R<sub>17</sub>, - $CONR_{17}R_{18}$  and  $-C(=NR_{19})NR_{17}R_{18}$ ;

## and wherein R<sub>6</sub> and R<sub>7</sub> are each selected from:

alkyl, substituted and unsubstituted phenyl or polyaromatic, substituted or unsubstituted heteroaromatic, wherein said hetero atom is selected from N, O and S, substituted or unsubstituted aralkyl, and substituted or unsubstituted, cyclic or polycyclic hydrocarbon, or mono- or polyheterocycle of 3 to 8 atom rings having one to four hetero atoms selected from N, O and S; and

wherein said substitutions are selected from hydroxyl, sulfhydryl, alkoxy, thioalkoxy, alkyl, halogen, CN, CF<sub>3</sub>, NO<sub>2</sub>, COOR<sub>12</sub>, NR<sub>12</sub>COR<sub>13</sub>, NR<sub>12</sub>SO<sub>2</sub>R<sub>13</sub> CONR<sub>12</sub>R<sub>13</sub>, NR<sub>12</sub>R<sub>13</sub>, and NR<sub>14</sub>CONR<sub>12</sub>R<sub>13</sub>;

> wherein R<sub>12</sub>, R<sub>13</sub> and R<sub>14</sub> are each selected from hydrogen, alkyl, heteroalkyl, aryl, arylalkyl, heteroaryl, heteroarylalkyl, cycloalkyl, and heterocycloalkyl;

and wherein NR<sub>12</sub>R<sub>13</sub> may form a substituted or unsubstituted, mono or bicyclic, ring with one to four heteroatoms selected from N, O and S;

and wherein NR<sub>4</sub>R<sub>5</sub> and NR<sub>6</sub>R<sub>7</sub> may each be selected from substituted and unsubstituted, mono or bicyclic, rings comprising one to four heteroatoms selected from N, O and S and wherein said N may also be substituted or unsubstituted,

and including salts thereof.

20

15

5

10

25

2. The compound of claim 1 wherein W and Z are each C-R<sub>8</sub>, C-R<sub>11</sub> or N and wherein X and Y are each C-R<sub>9</sub> or C-R<sub>10</sub>.

- 3. The compound of claim 1 wherein X and Y are each C-R<sub>9</sub>, C-R<sub>10</sub> or N and wherein W and Z are each C-R<sub>8</sub> or C-R<sub>11</sub>.
  - 4. The compound of claim 1 wherein W is C-R<sub>8</sub> or N and wherein X, Y and Z are each C-R<sub>9</sub>, C-R<sub>10</sub> or C-R<sub>11</sub>.
- 5. The compound of claim 1 wherein Z is C-R<sub>11</sub> or N and wherein W, Y and Z are each C-R<sub>8</sub>, C-R<sub>9</sub> or C-R<sub>10</sub>.
  - 6. The compound of claim 1 wherein X is C-R $_9$  or N and wherein W, Y and Z are each C-R $_8$ , C-R $_{10}$  or C-R $_{11}$ .

7. The compound of claim 1 wherein Y is C-R<sub>10</sub> or N and wherein W, X, and Z are each CH, C-R<sub>8</sub>, C-R<sub>9</sub> or C-R<sub>11</sub>.

15

- 8. The compound of claim 1 wherein W, X, Y and Z are each selected from CH, C-R<sub>8</sub>, C-R<sub>9</sub>, C-R<sub>10</sub> and C-R<sub>11</sub>.
  - 9. The compound of claim 8 wherein W, X, Y and Z are each CH.
- 10. The compound of claim 1 wherein R<sub>2</sub> and R<sub>3</sub> are each selected from hydrogen, lower alkyl of 1-6 carbons and aryl.
  - 11. The compound of claim 1 wherein  $R_1$  is selected from hydrogen, alkyl, cycloalkyl, unsubstituted or substituted phenyl, unsubstituted or substituted benzyl, -methylpyridine, -ethylpyridine, -methylindole, -ethylindole, alkoxyethyl-, hydroxyethyl-, N,N-dialkyl-ethyl, N,N-dialkyl-propyl, methylpyrrole, -ethylpyrrole, -methylfuran, -ethylfuran, -alkylmorpholine, -alkylpiperizine, -alkypiperidine, and -alkylpyrrolidine, and wherein  $R_2$  and  $R_3$  are each hydrogen, lower alkyl (1-6 carbon) or aryl.

12. The compound of claim 1 wherein  $R_4$  and  $R_5$  are each selected from hydrogen, alkyl, cycloalkyl, unsubstituted or substituted phenyl, unsubstituted or substituted benzyl, -methylpyridine, -ethylpyridine, -methylindole, -ethylindole, alkoxyethyl-, hydroxyethyl-, N,N-dialkyl-ethyl, N,N-dialkyl-propyl, -methylpyrrole, -ethylpyrrole, -methylfuran, -ethylfuran, -alkylmorpholine, -alkylpiperizine, -alkypiperidine, and -alkylpyrrolidine, or wherein -NR $_4$ R $_5$  is a substituted or unsubstituted, monocyclic or bicyclic, heterocycloalkyl ring, and wherein R $_2$  and R $_3$  are each selected from hydrogen, lower alkyl (1-6 carbon) and aryl.

5

10

15

25

- 13. The compound of claim 1 wherein  $R_6$  and  $R_7$  are selected from alkyl, cycloalkyl, unsubstituted or substituted phenyl, unsubstituted or substituted benzyl, -methylpyridine, -ethylpyridine, -methylindole, -ethylindole, alkoxyethyl-, hydroxyethyl-, N,N-dialkyl-ethyl, N,N-dialkyl-propyl, -methylpyrrole, -ethylpyrrole, -methylfuran, -ethylfuran, -alkylmorpholine, -alkylpiperizine, -alkypiperidine, and -alkylpyrrolidine, and  $R_2$  and  $R_3$  are selected from hydrogen, lower alkyl (1-6 carbon) and aryl.
- 20 14. The compound of claim 9 wherein R<sub>2</sub> and R<sub>3</sub> are selected from hydrogen, lower alkyl (1-6 carbon) and aryl.
  - 15. The compound of claim 9 wherein  $R_1$ ,  $R_4$  and  $R_5$  are each selected from hydrogen, alkyl, cycloalkyl, unsubstituted or substituted phenyl, unsubstituted or substituted benzyl, methylpyridine, -ethylpyridine, -methylindole, -ethylindole, alkoxyethyl-, hydroxyethyl-, N,N-dialkyl-ethyl, N,N-dialkyl-propyl, -methylpyrrole, -ethylpyrrole, -methylfuran, -ethylfuran, -alkylmorpholine, -alkylpiperizine, -alkypiperidine, and -alkylpyrrolidine, or wherein -NR $_4$ R $_5$  is a substituted or unsubstituted, monocyclic or bicyclic, heterocycloalkyl ring, and wherein  $R_2$  and  $R_3$  are each hydrogen, lower alkyl (1-6 carbon) or aryl and wherein  $R_6$  and  $R_7$  are each selected from alkyl, cycloalkyl, unsubstituted or substituted phenyl, unsubstituted or substituted

benzyl, -methylpyridine, -ethylpyridine, -methylindole, -ethylindole, alkoxyethyl-, hydroxyethyl, N,N-dialkyl-ethyl, N,N-dialkyl-propyl, -methylpyrrole, -ethylpyrrole, -methylfuran, -alkylmorpholine, -alkylpiperizine, -alkylpiperidine, and -alkylpyrrolidine.

5

16. The compound of claim 1 wherein  $R_2$  and  $R_3$  are each selected from hydrogen and alkyl, and wherein  $R_4$  and  $R_6$  are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C \\ R_{16} \end{bmatrix}_{n} -NR_{17}R_{18}$$

10

where n is 2 ,3 or 4 and one or both of  $R_5$  and  $R_7$  is alkyl.

15 a

17. The compound of claim 9 wherein  $R_1$  is alkyl, wherein  $R_2$  and  $R_3$  are each selected from hydrogen and alkyl and wherein  $R_4$  and  $R_6$  are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C \\ R_{16} \end{bmatrix}_{n} -NR_{17}R_{18}$$

wherein n is 2, 3 or 4 and one or both of  $R_5$  and  $R_7$  is alkyl.

20

18. The compound of claim 1 wherein  $R_2$  and  $R_3$  are each selected from hydrogen and alkyl, wherein  $R_4$  and  $R_6$  are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C \\ R_{16} \end{bmatrix}_{n} \begin{bmatrix} O \\ -R_{17} \\ R_{19} \end{bmatrix}$$

wherein n is 2, 3 or 4 and one or both of  $R_5$  and  $R_7$  is alkyl.

19. The compound of claim 1 wherein R<sub>2</sub> and R<sub>3</sub> are each selected from hydrogen and alkyl wherein R4 and R6 are each selected from alkyl and

$$\begin{bmatrix}
R_{15} \\
-C \\
R_{16}
\end{bmatrix}$$

$$\begin{bmatrix}
N \\
R_{18} \\
n
\end{bmatrix}$$

$$\begin{bmatrix}
R_{17} \\
R_{18}
\end{bmatrix}$$

where n is 2, 3 or 4 and one or both of R<sub>5</sub> and R<sub>7</sub> is alkyl

20. Compound of claim 1wherein

5

10

20

R<sub>2</sub> and R<sub>3</sub> are each selected from hydrogen and alkyl

R<sub>4</sub> and R<sub>6</sub> are each selected from alkyl and

15 where n is 2,3 or 4 and one or both of  $R_5$  and  $R_7$  is alkyl.

21. The compound of claim 1 wherein

R<sub>2</sub> and R<sub>3</sub> are each selected from hydrogen and alkyl R4 and R6 are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C \\ R_{16} \end{bmatrix}_{n} \begin{bmatrix} O \\ -N \\ R_{19} \end{bmatrix}_{n}$$

where n is 2, 3 or 4 and one or both of  $R_5$  and  $R_7$  is alkyl.

22. The compound of claim 1 wherein

 $R_2$  and  $R_3$  are each selected from hydrogen and alkyl,  $R_4$  and  $R_6$  are each selected from alkyl and

$$\begin{bmatrix} R_{15} \\ -C - \\ R_{16} \end{bmatrix}_n - O - R_{17}$$

where n is 2, 3 or 4 and one or both of  $R_5$  and  $R_7$  is alkyl.

5 23. The compound of claim 1 wherein  $R_1$  is methyl.

25

24. The compound of claim 9 wherein  $R_1$  is methyl.

10 25. The compound of claim 1 wherein  $R_1$ ,  $R_6$  and  $R_7$  are methyl.

26. The compound of claim 9 wherein  $R_1$ ,  $R_6$ , and  $R_7$  are methyl.

- 27. The compound of claim 23 wherein  $-NR_4R_5$  is a substituted or unsubstituted, monocyclic or bicyclic, heterocycloalkyl ring.
  - 28. The compound of claim 25 wherein -NR₄R₅ is a substituted or unsubstituted, monocyclic or bicyclic, heterocycloalkyl ring.
- 29. The compound of claim 26 wherein -NR $_4$ R $_5$  is a substituted or unsubstituted, monocyclic or bicyclic, heterocycloalkyl ring.
  - 30. The compound of claim 26 wherein -NR $_4$ R $_5$  is selected from aziridine, pyrrolidine, piperidine, hydroxy piperidine, morpholine, and N-methyl piperazine.

31. The compound of claim 23 wherein  $R_4$  and  $R_5$  are each lower alkylene-OR $_{20}$  wherein  $R_{20}$  is hydrogen or lower alkyl.

32. The compound of claim 25 wherein  $R_4$  and  $R_5$  are each lower alkylene-OR20 wherein  $R_{20}$  is hydrogen or lower alkyl.

- 33. The compound of claim 26 wherein  $R_4$  and  $R_5$  are each lower alkylene- $OR_{20}$  wherein  $R_{20}$  is hydrogen or lower alkyl.
  - 34. A compound of claim 1 having a structure of Table 1 including salts thereof.
- 10 35. A compound of claim 1 having a structure of Table 2 including salts thereof.
  - 36. A compound of claim 1 having a structure of Table 3 including salts thereof.

37. A compound of claim 1 having a structure of Table 4 including salts thereof.

38. A compound of claim 1 having a structure of Table 5 including salts 20 thereof.

15

- 39. A compound of claim 1 having a structure of Table 6 including salts thereof.
- 40. A compound having a structure of Table 7 or Table 8 including salts thereof.
  - 41. A compound having a structure of Table 9 or Table 10 including salts thereof.
  - 42. A compound having a structure of Table 11 or Table 12 including salts thereof.

43. A pharmaceutical composition comprising a therapeutically effective amount of a compound of Claim 1 in a pharmaceutically acceptable carrier.

5

- 44. A method for preventing or treating a disease associated with a change in levels of expression of a set of genes in a mammal comprising administering to said mammal an effective amount of a compound of Claim 1.
- 45. A method for preventing or treating a disorder modulated by altered gene expression, wherein the disorder is selected from the group consisting of cancer, cardiovascular disorders, arthritis, osteoporosis, inflammation, periodontal disease and skin disorders, by administering to a mammal in need of such treatment a safe and effective amount of a compound according to Claim 1.
  - 46. The method of Claim 45, wherein the disorder is cancer.
  - 47. The method of claim 46 wherein said treatment prevents, arrests or reverts tumor growth and metastasis.
  - 48. The method of claim 46 wherein said cancer is selected from the group consisting of solid tumors, lymphomas, skin cancer, urinary bladder cancer, breast cancer, uterine cancer, ovarian cancer, prostate cancer, lung cancer, colon cancer, rectum cancer, pancreatic cancer, kidney cancer, and stomach cancer.
  - 49. The method of Claim 48 wherein the cancer is breast or colon cancer.

30

20

25

50. The method of claim 49 wherein said breast or colon cancer is adenocarcinoma.

5

10

20

25

- 51. The method of Claim 45 wherein the disorder is a cardiovascular disorder selected from the group consisting of dilated cardiomyopathy, congestive heart failure, atherosclerosis, plaque rupture, reperfusion injury, ischemia, chronic obstructive pulmonary disease, angioplasty restenosis, and aortic aneurysm.
- 52. A gene set wherein expression of each member of said gene set is modulated as a result of treatment with a compound of claim 1.
- 53. The gene set of claim 52 wherein expression of each member of said gene set is increased or each member of said gene set is decreased as a result of said treatment.
- 54. The gene set of claim 52 wherein the members of said gene set are selected from the genes identified in Table 19.
  - 55. The gene set of claim 52 wherein said gene set is present in a cell.
  - 56. A method for identifying an agent that modulates the expression of a gene set of claim 51, comprising:
    - (a) contacting a compound with a test system containing one or more polynucleotides corresponding to each of the members of the gene set of claim 52 under conditions wherein the members of said gene set are being expressed; (b) determining a change in expression of each of said one or more polynucleotides of step (a) as a result of said contacting;

wherein said change in expression in step (b) indicates modulation of the members of said gene set thereby identifying said test compound as an agent that modulates the expression of said gene set.

57. The method of claim 56 wherein said change in expression is a decrease in expression of said one or more polynucleotides.

58. The method of claim 56 wherein said change in expression is a change in transcription of said one or more polynucleotides.

- 5 59. The method of claim 56 wherein said change in expression is determined by determining a change in activity of a polypeptide encoded by said polynucleotide.
- 60. The method of claim 56 wherein said one or more polynucleotides are present in a cell.
  - 61. The method of claim 60 wherein said cell is a cancer cell.
- 62. The method of claim 60 wherein said cancer cell is a breast or colon cancer cell.
  - 63. The method of claim 62 wherein said breast or colon cancer cell is an adenocarcinoma cancer cell.
- 20 64. The method of claim 60 wherein said cell is a recombinant cell engineered to contain said set of genes.
  - 65. A set of genes comprising a plurality of subsets of genes wherein each subset of said plurality is a gene set identified by the method of claim 56.
  - 66. Compounds identified as having activity using the method of claim 56.
- 67. The gene set of claim 51 wherein said gene set comprises a subset 30 of the genes of Table 19.

25

68. The method of claim 56 wherein said compound modulates the expression of a subset of genes of Table 19.

69. A compound of claim 1 and having a structure of Table 13 and Table 14 including salts thereof.

- 70. A compound of claim 1 and having a structure of Table 15 and 5 Table 16 including salts thereof.
  - 71. A compound of claim 1 and having a structure of Table 17 and Table 18 including salts thereof.
